# 1. Oceanography

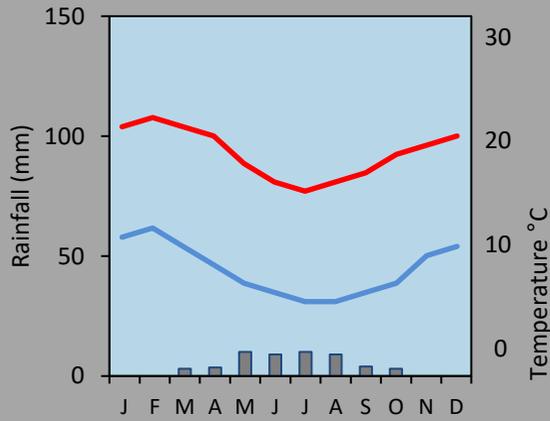

**Marine  
Biogeography**

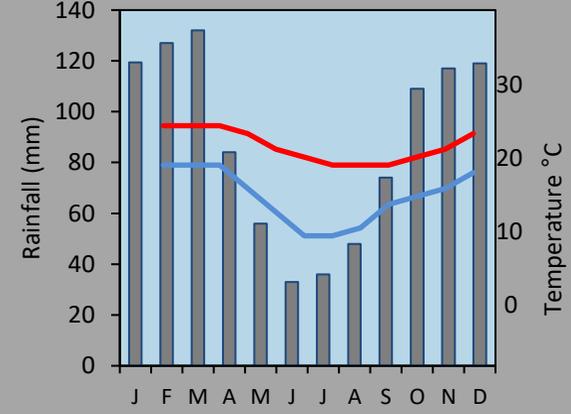

# Effects of currents on terrestrial climate

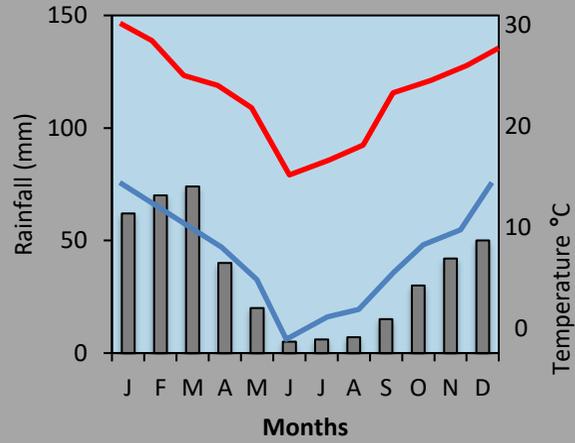

**Port Nolloth**

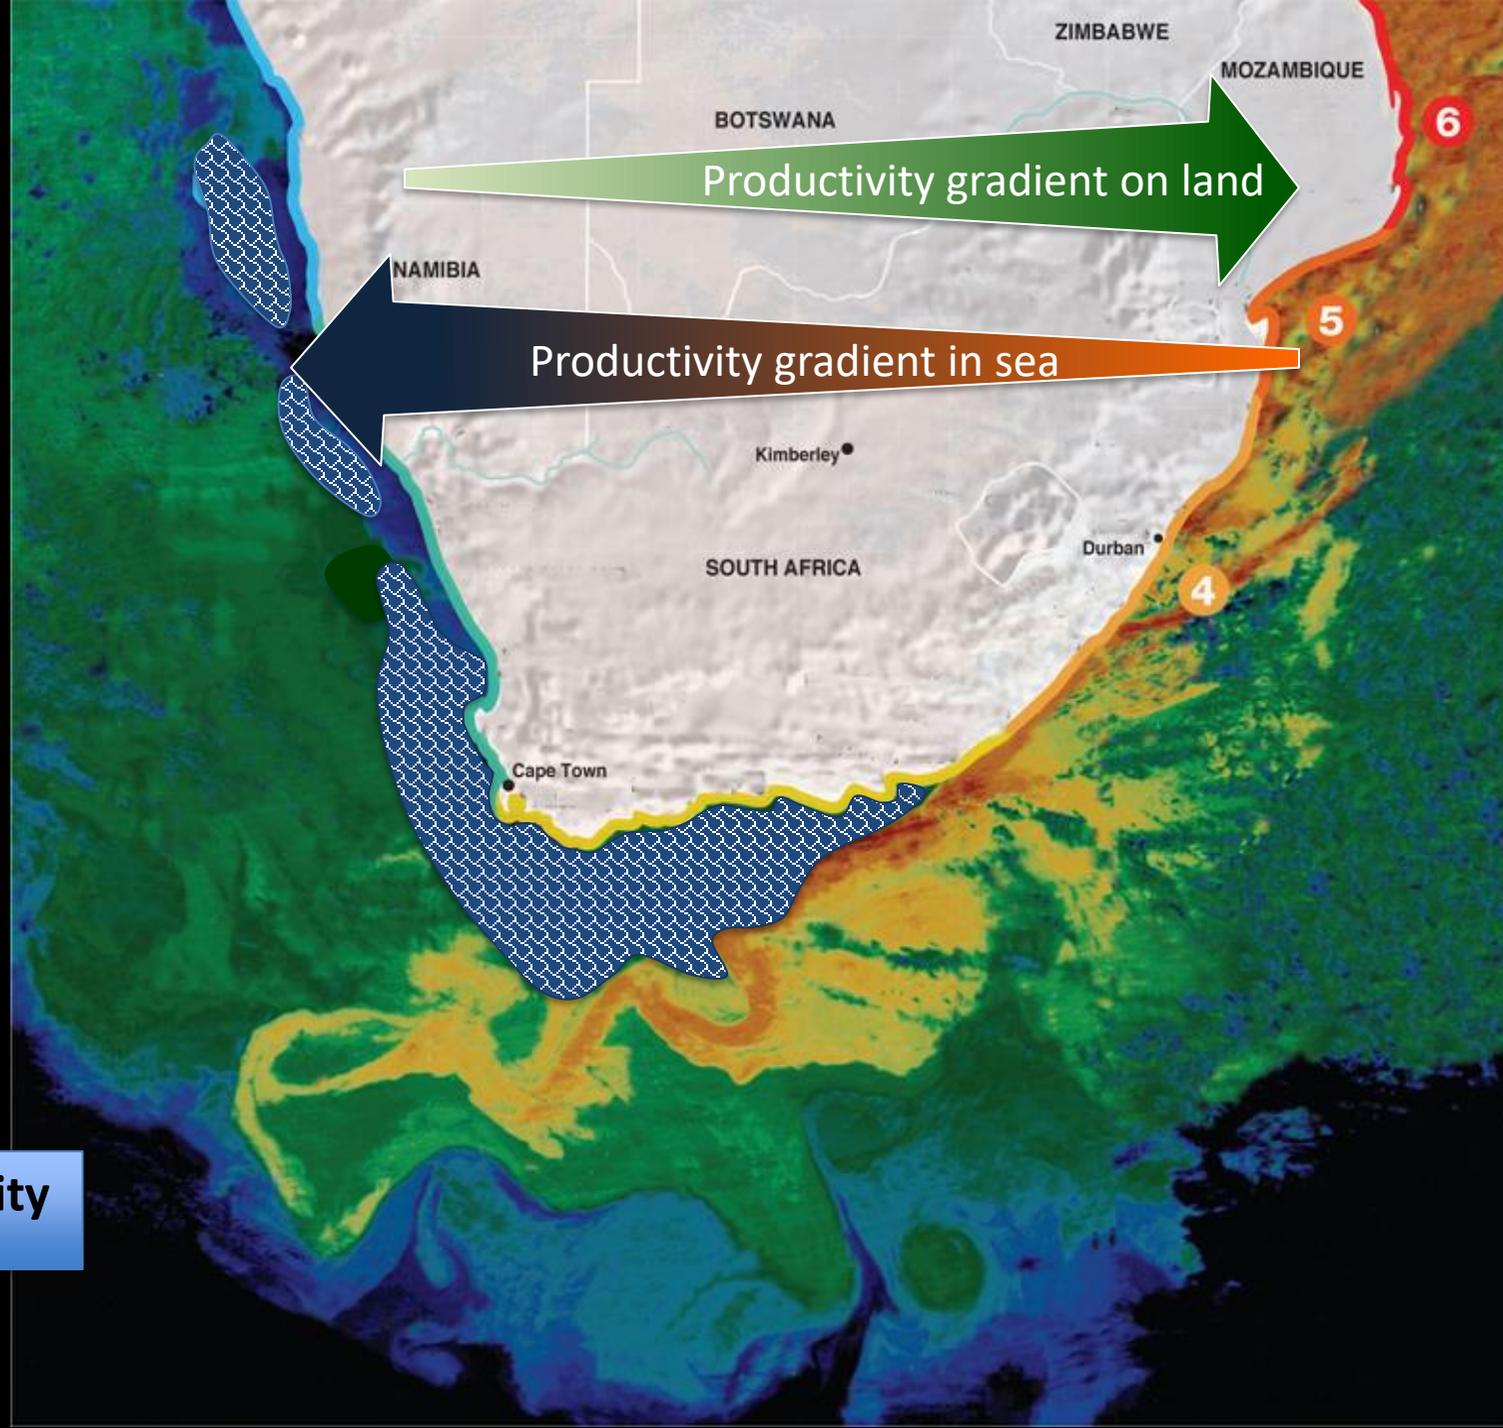

**Durban**

**Kimberley**

Deserts on Land

Forests & agriculture on Land

High productivity in sea

Low productivity in sea

Major fishing grounds

Productivity

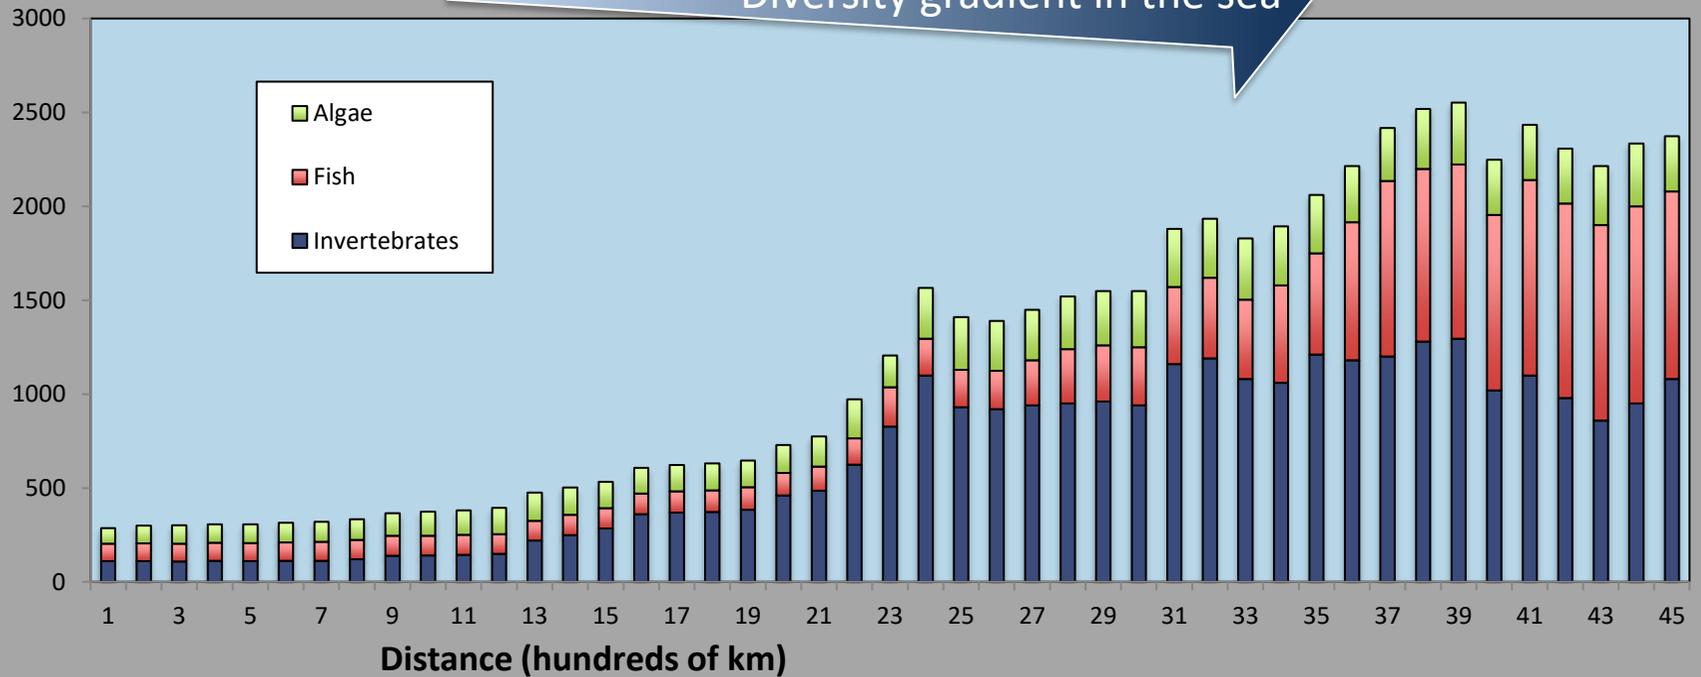

## Effects on biodiversity

Number of species per 100-km intervals

West Coast

South Coast

East Coast

Really important life

## 2. Contributions of the Two Oceans Aquarium to marine science

**Bob Steneck's hypothesis:**

**Encrusting corallines**

**thrive in...**

**(a) Low productivity  
(=low light)**

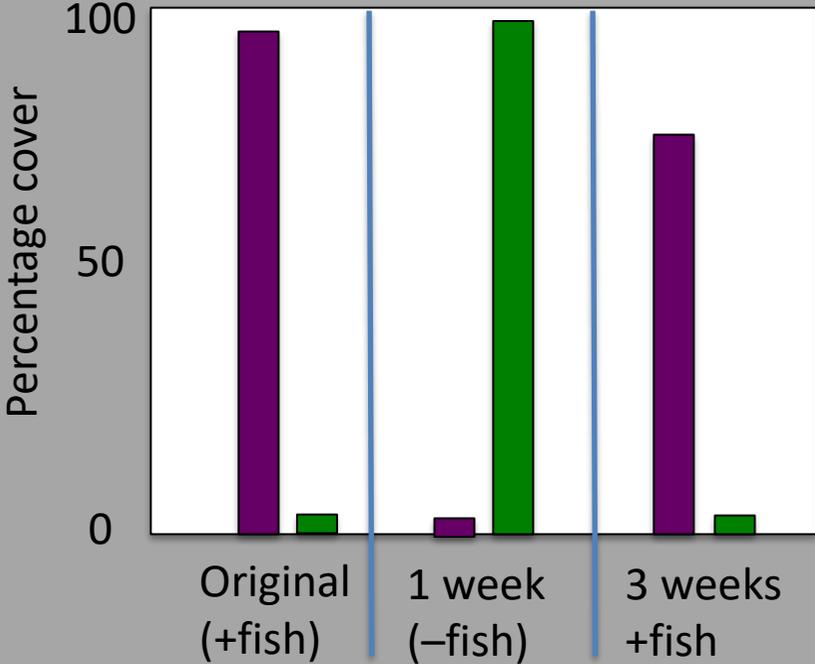

**(b) High disturbance  
(=grazing)**

Fish present in aquarium

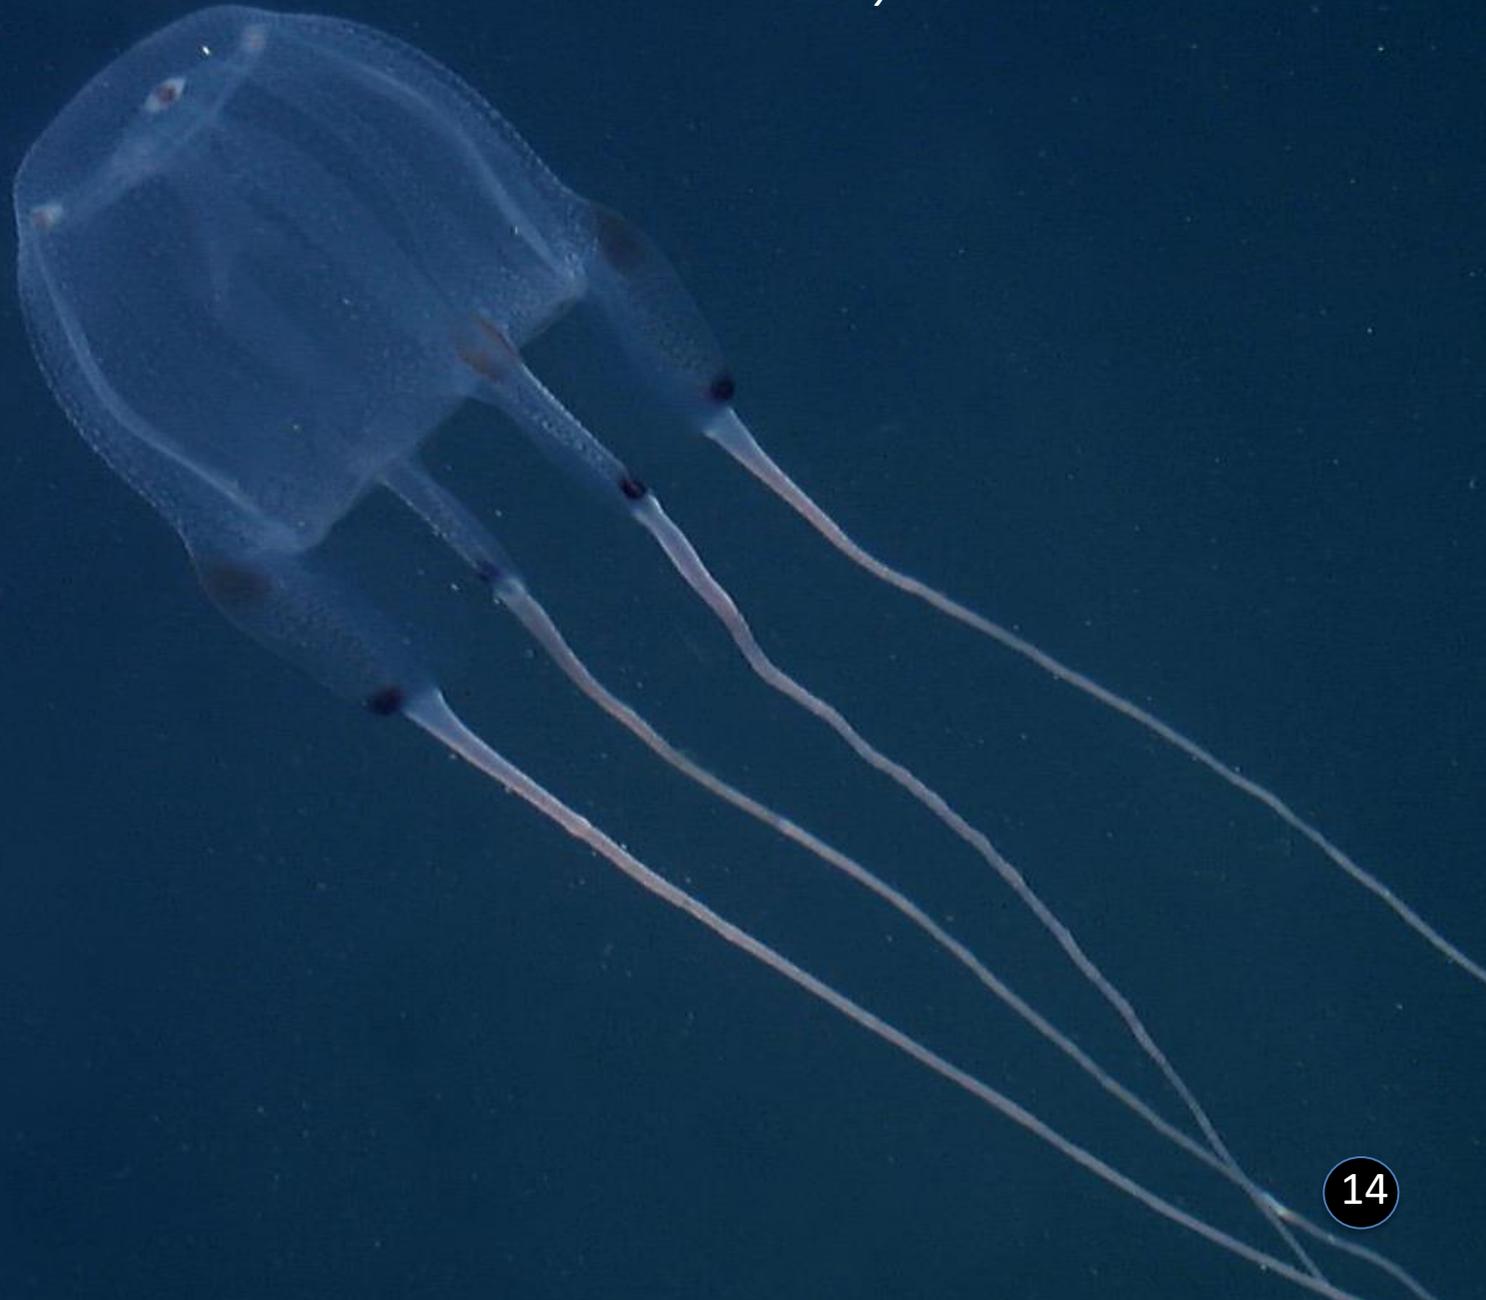

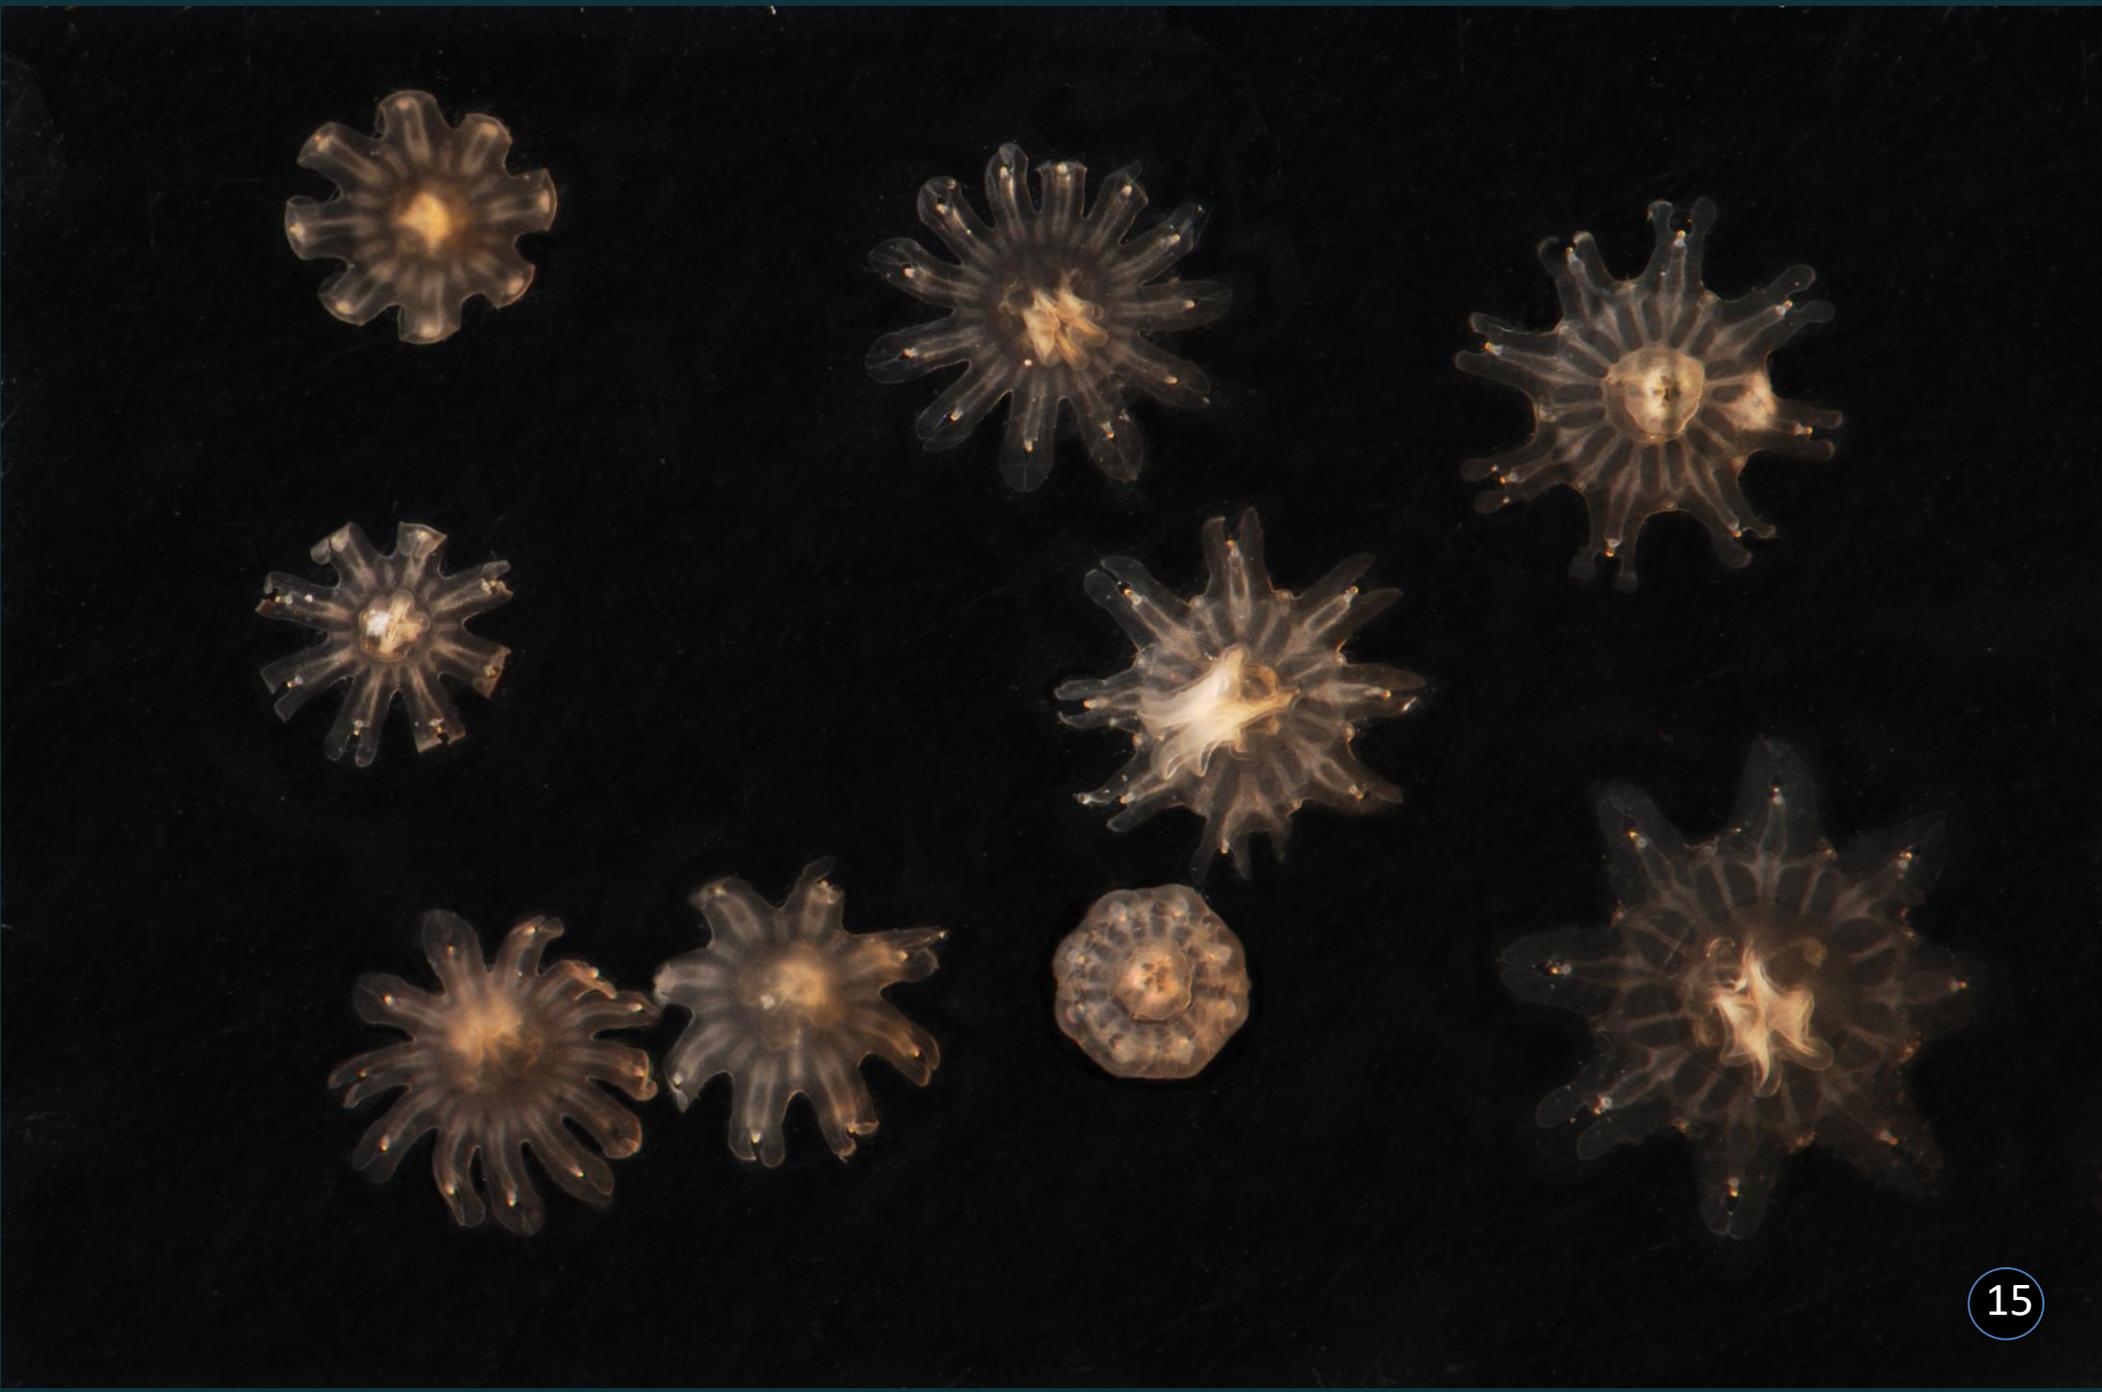

After 'experimental' removal of fish

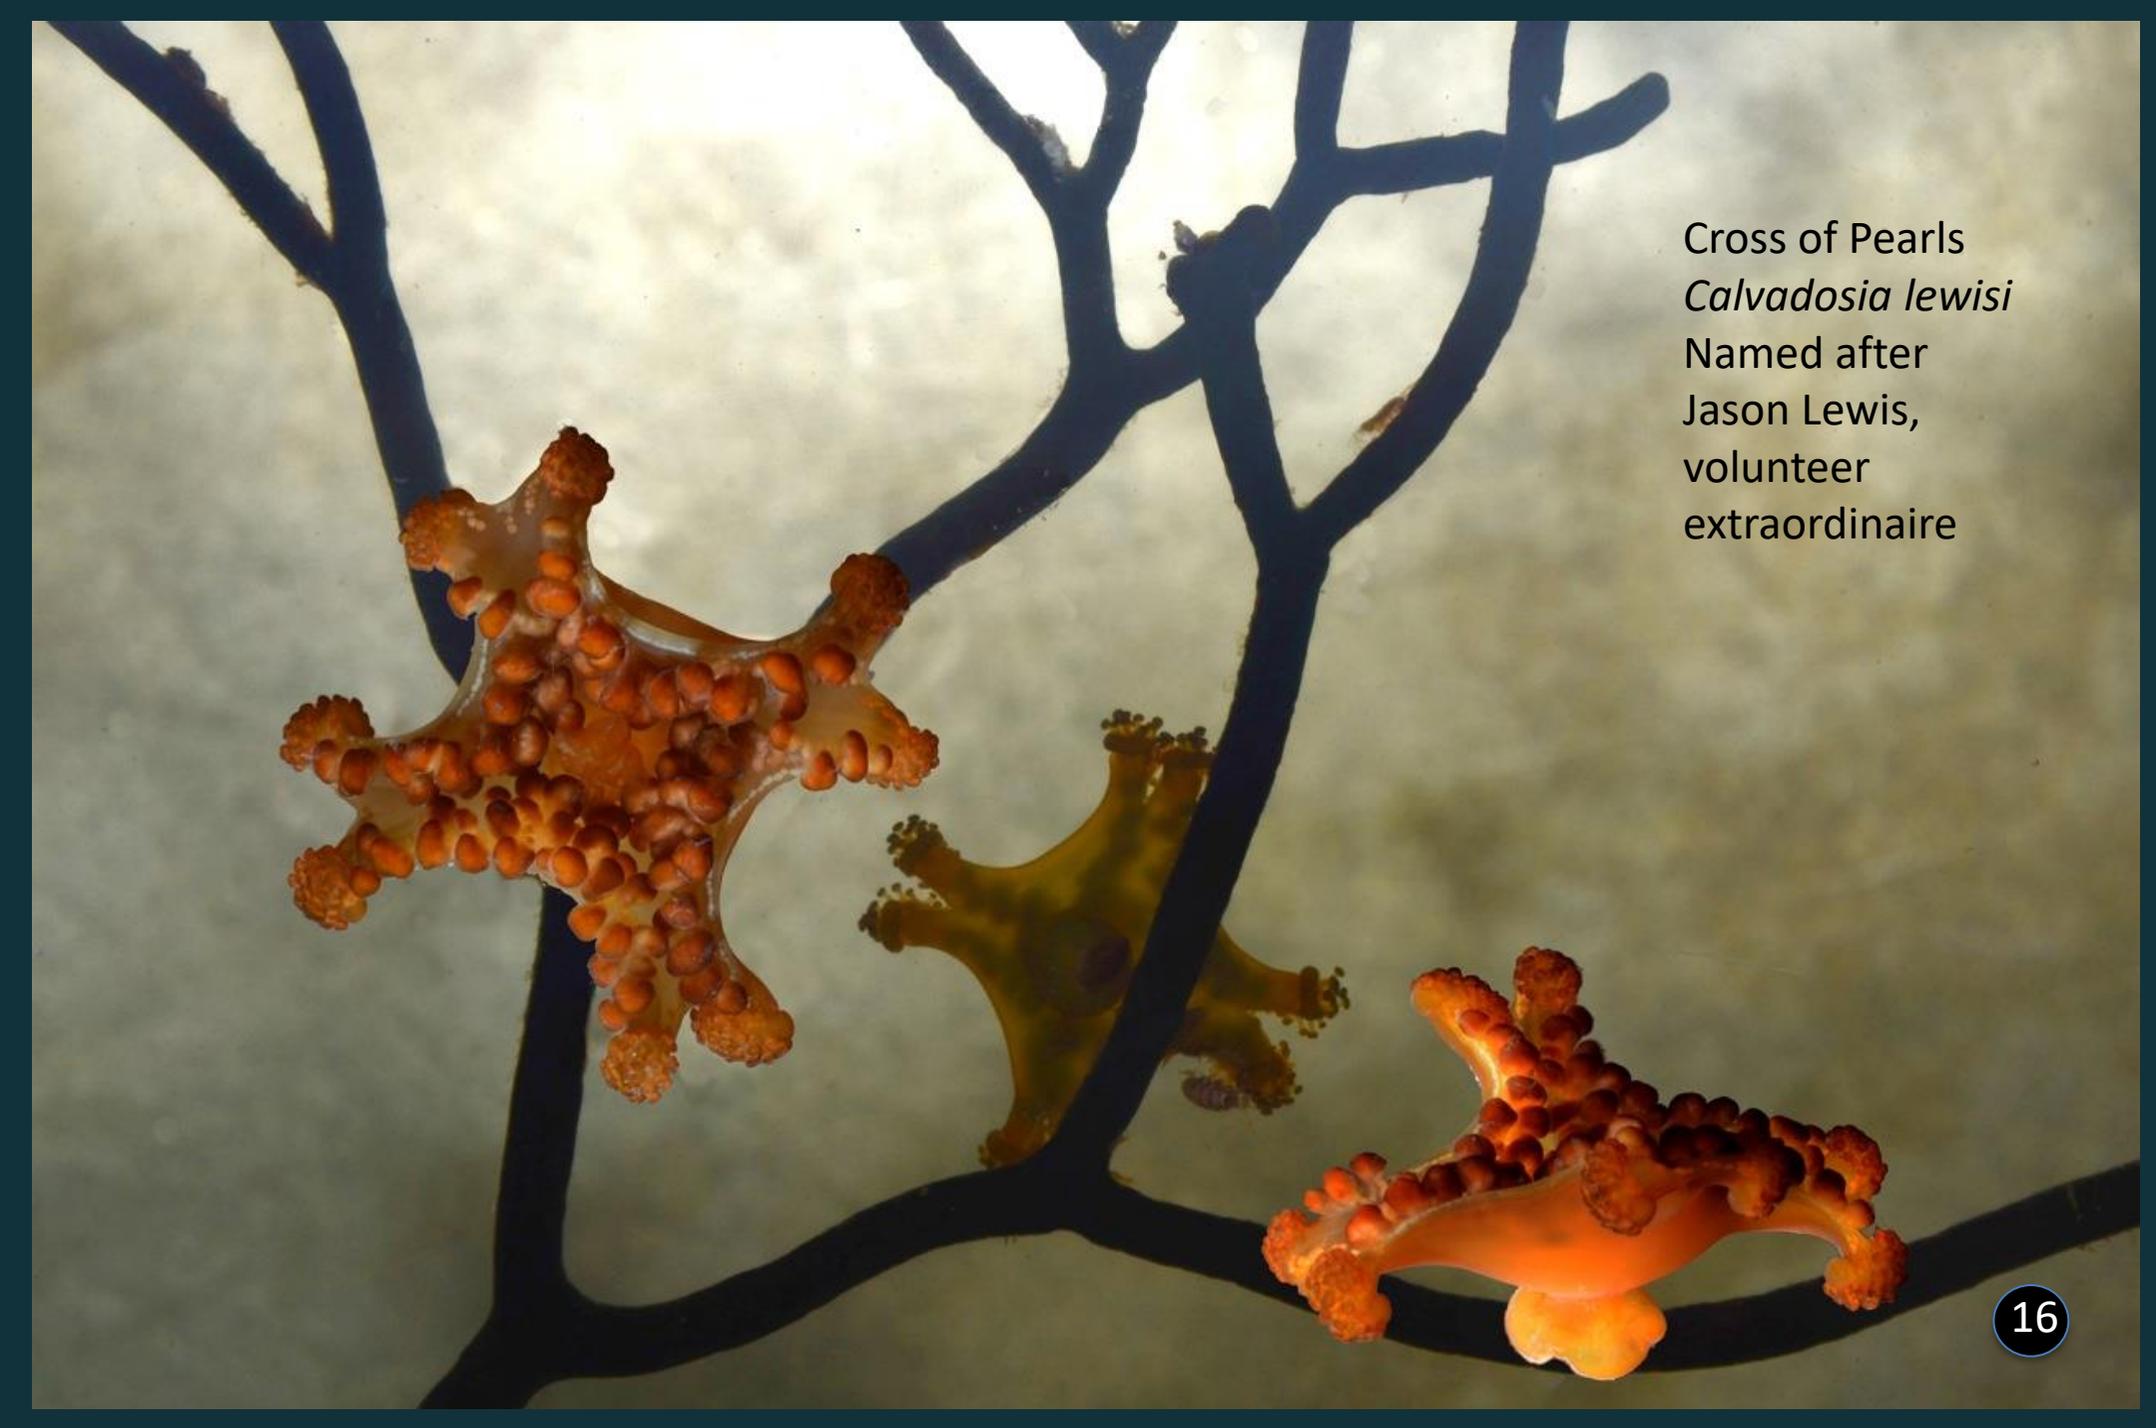

Discovery of new species  
at Two Oceans Aquarium

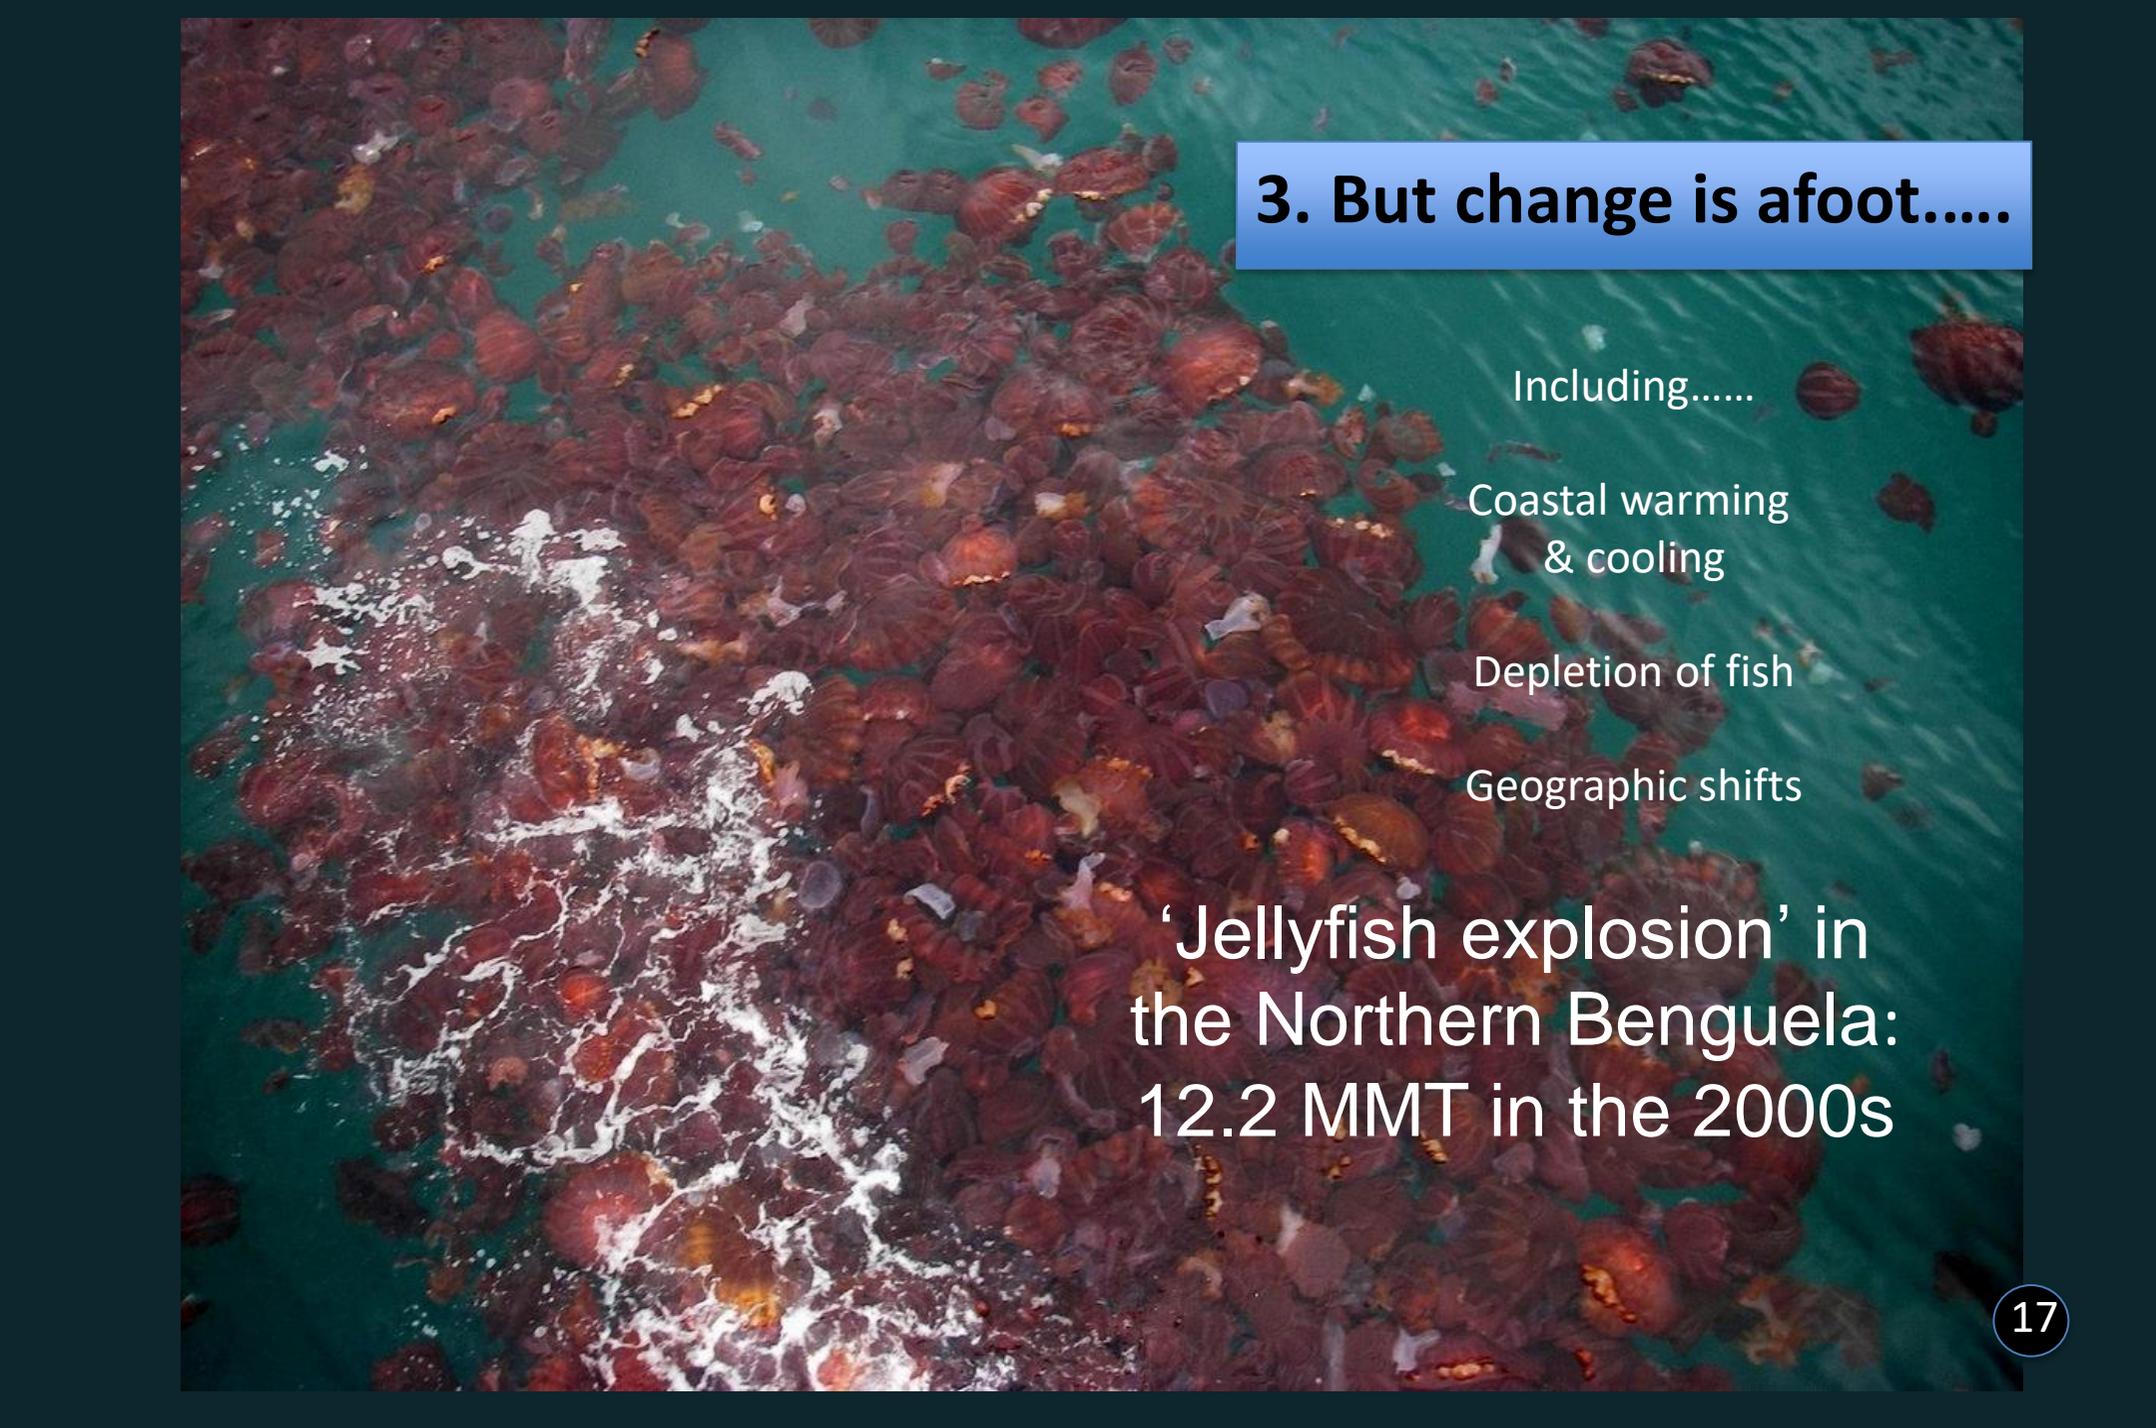

*Carybdea branchi*

Cross of Pearls  
*Calvadosia lewisi*  
Named after  
Jason Lewis,  
volunteer  
extraordinaire

An aerial photograph showing a vast, dense bloom of reddish-brown jellyfish covering a large area of the ocean's surface. The water is a deep teal color, and the jellyfish appear as a thick, textured carpet of small, rounded organisms. A white wake from a boat is visible in the lower-left quadrant, cutting through the jellyfish.

### 3. But change is afoot.....

Including.....

Coastal warming  
& cooling

Depletion of fish

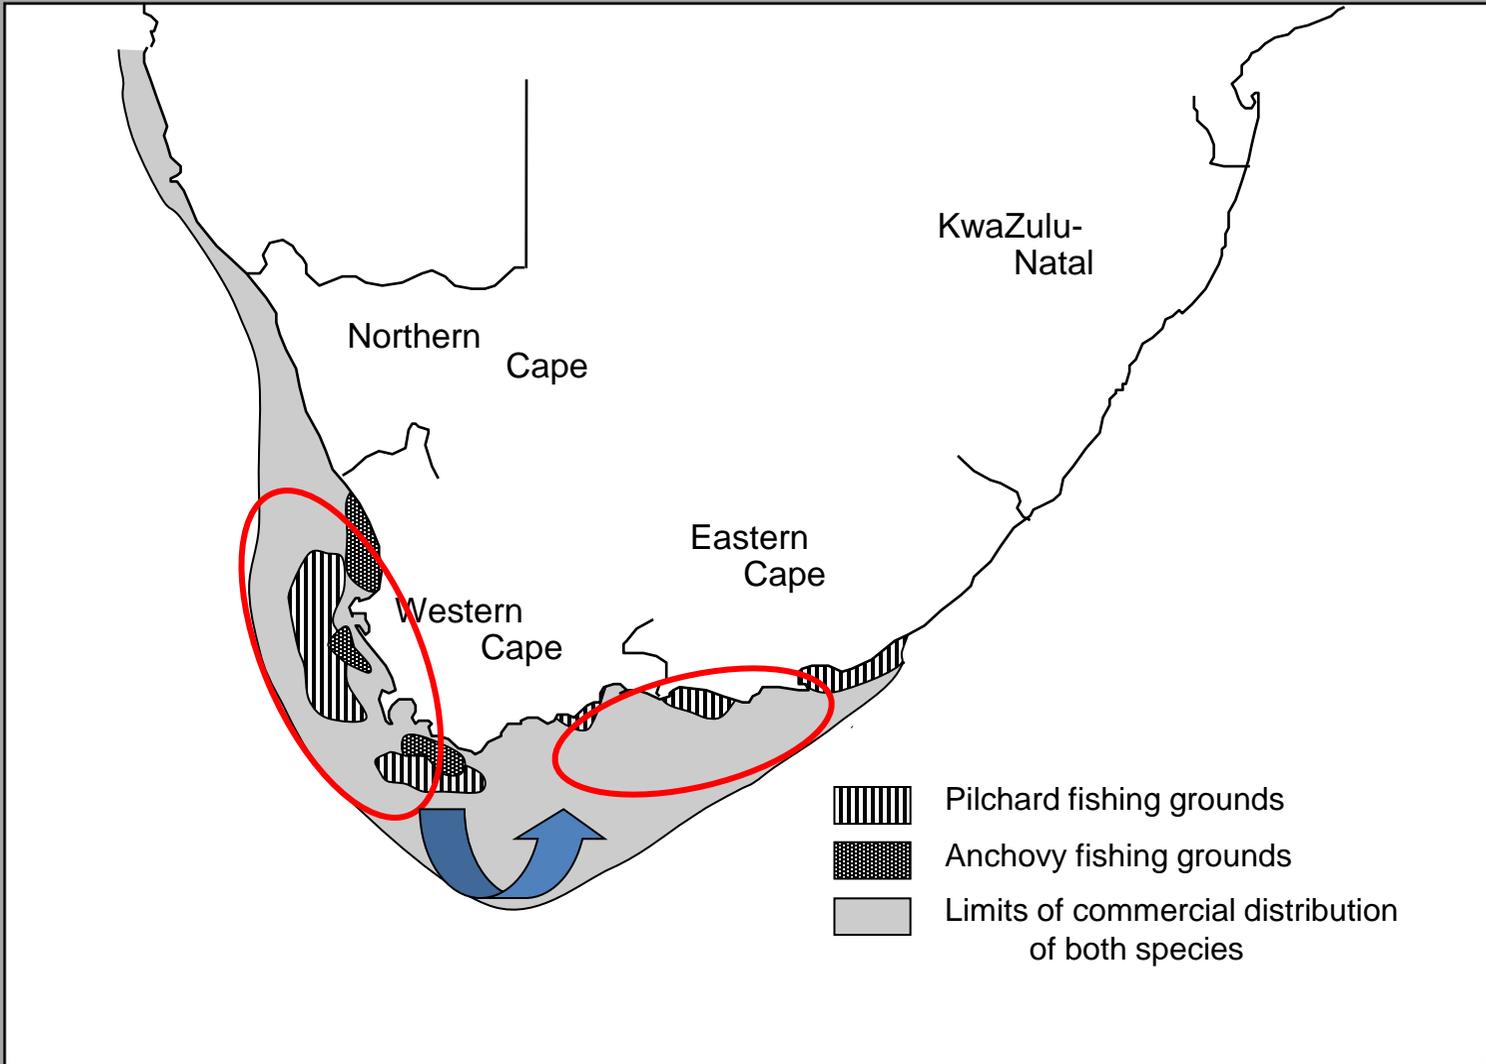

Geographic shifts

‘Jellyfish explosion’ in  
the Northern Benguela:  
12.2 MMT in the 2000s

# Geographic shifts of pelagic fish

Photo: Dennis King

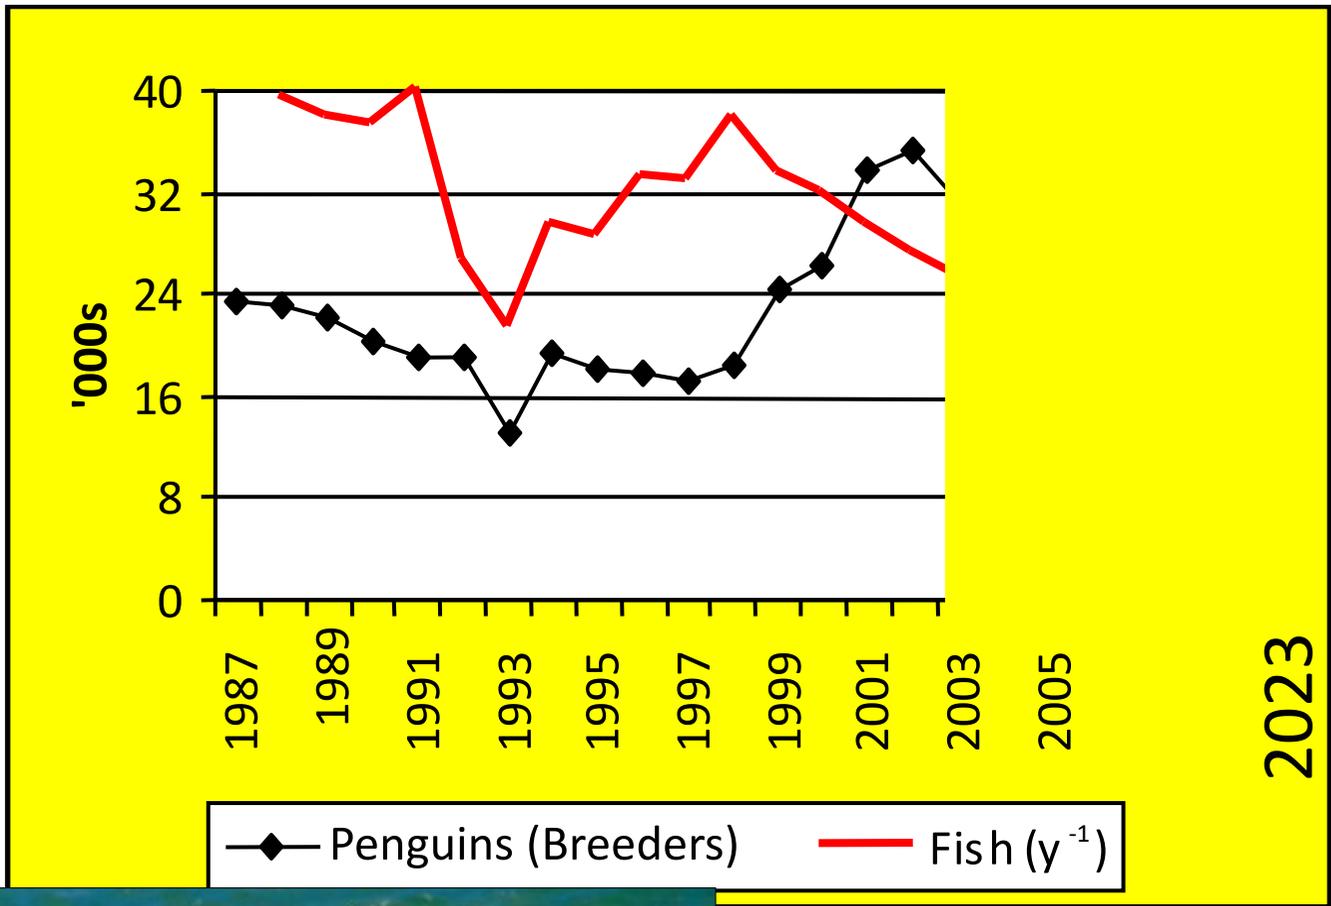

*Dassen Island 1930*

*Dassen Island 2008*

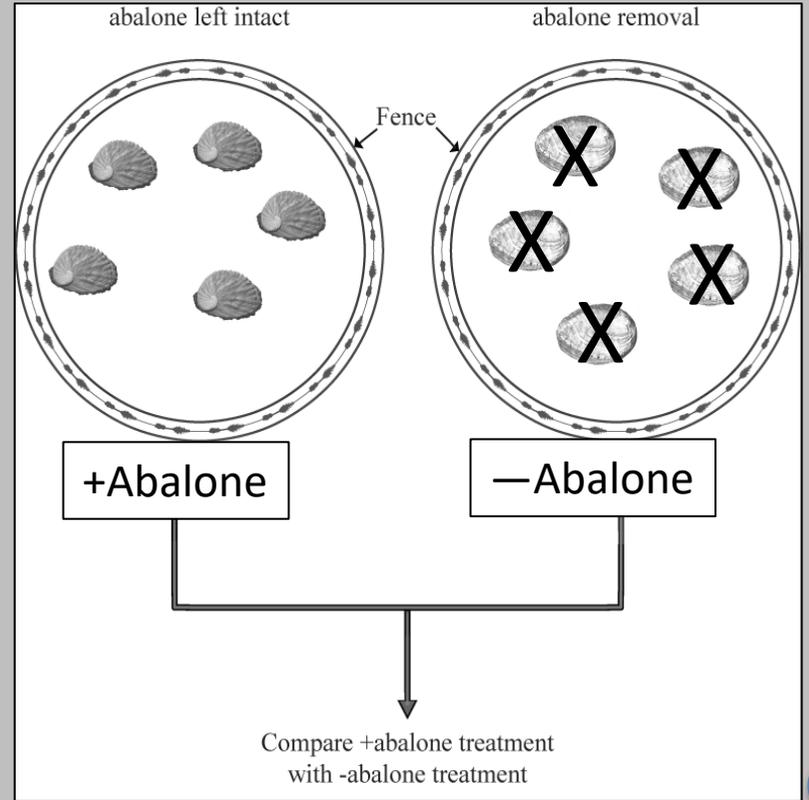

# Penguins on west coast

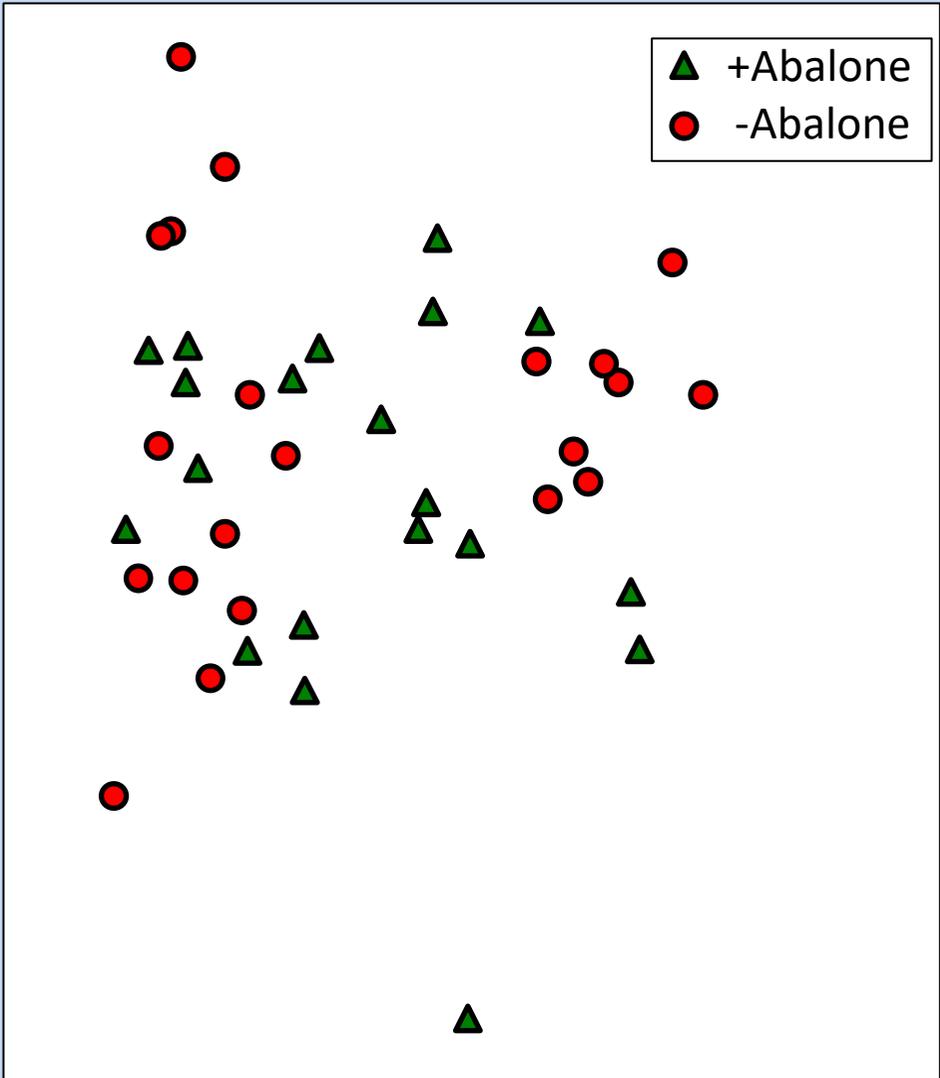

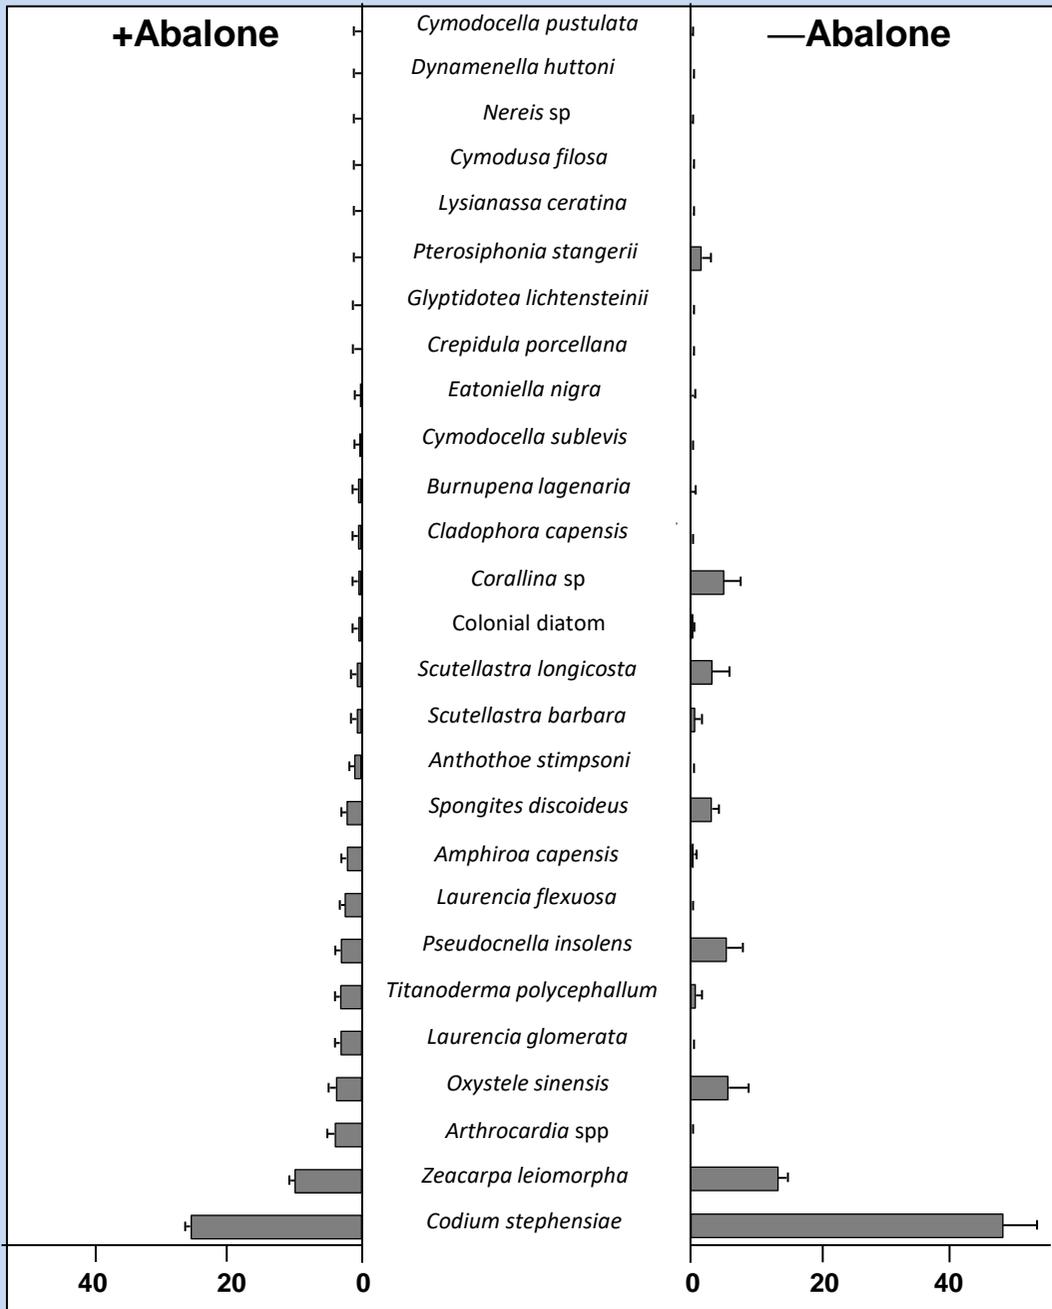

Data: Rob Crawford

#### 4. Ecosystem effects of commercially important species

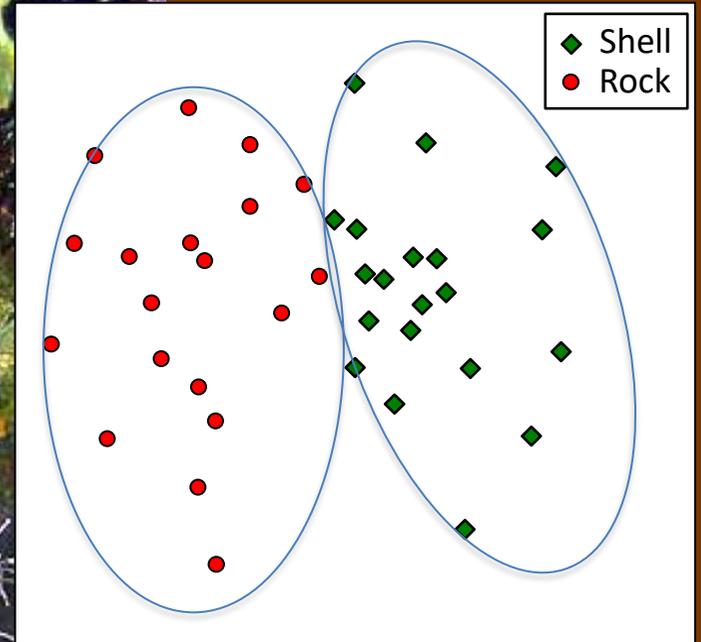

No significant difference

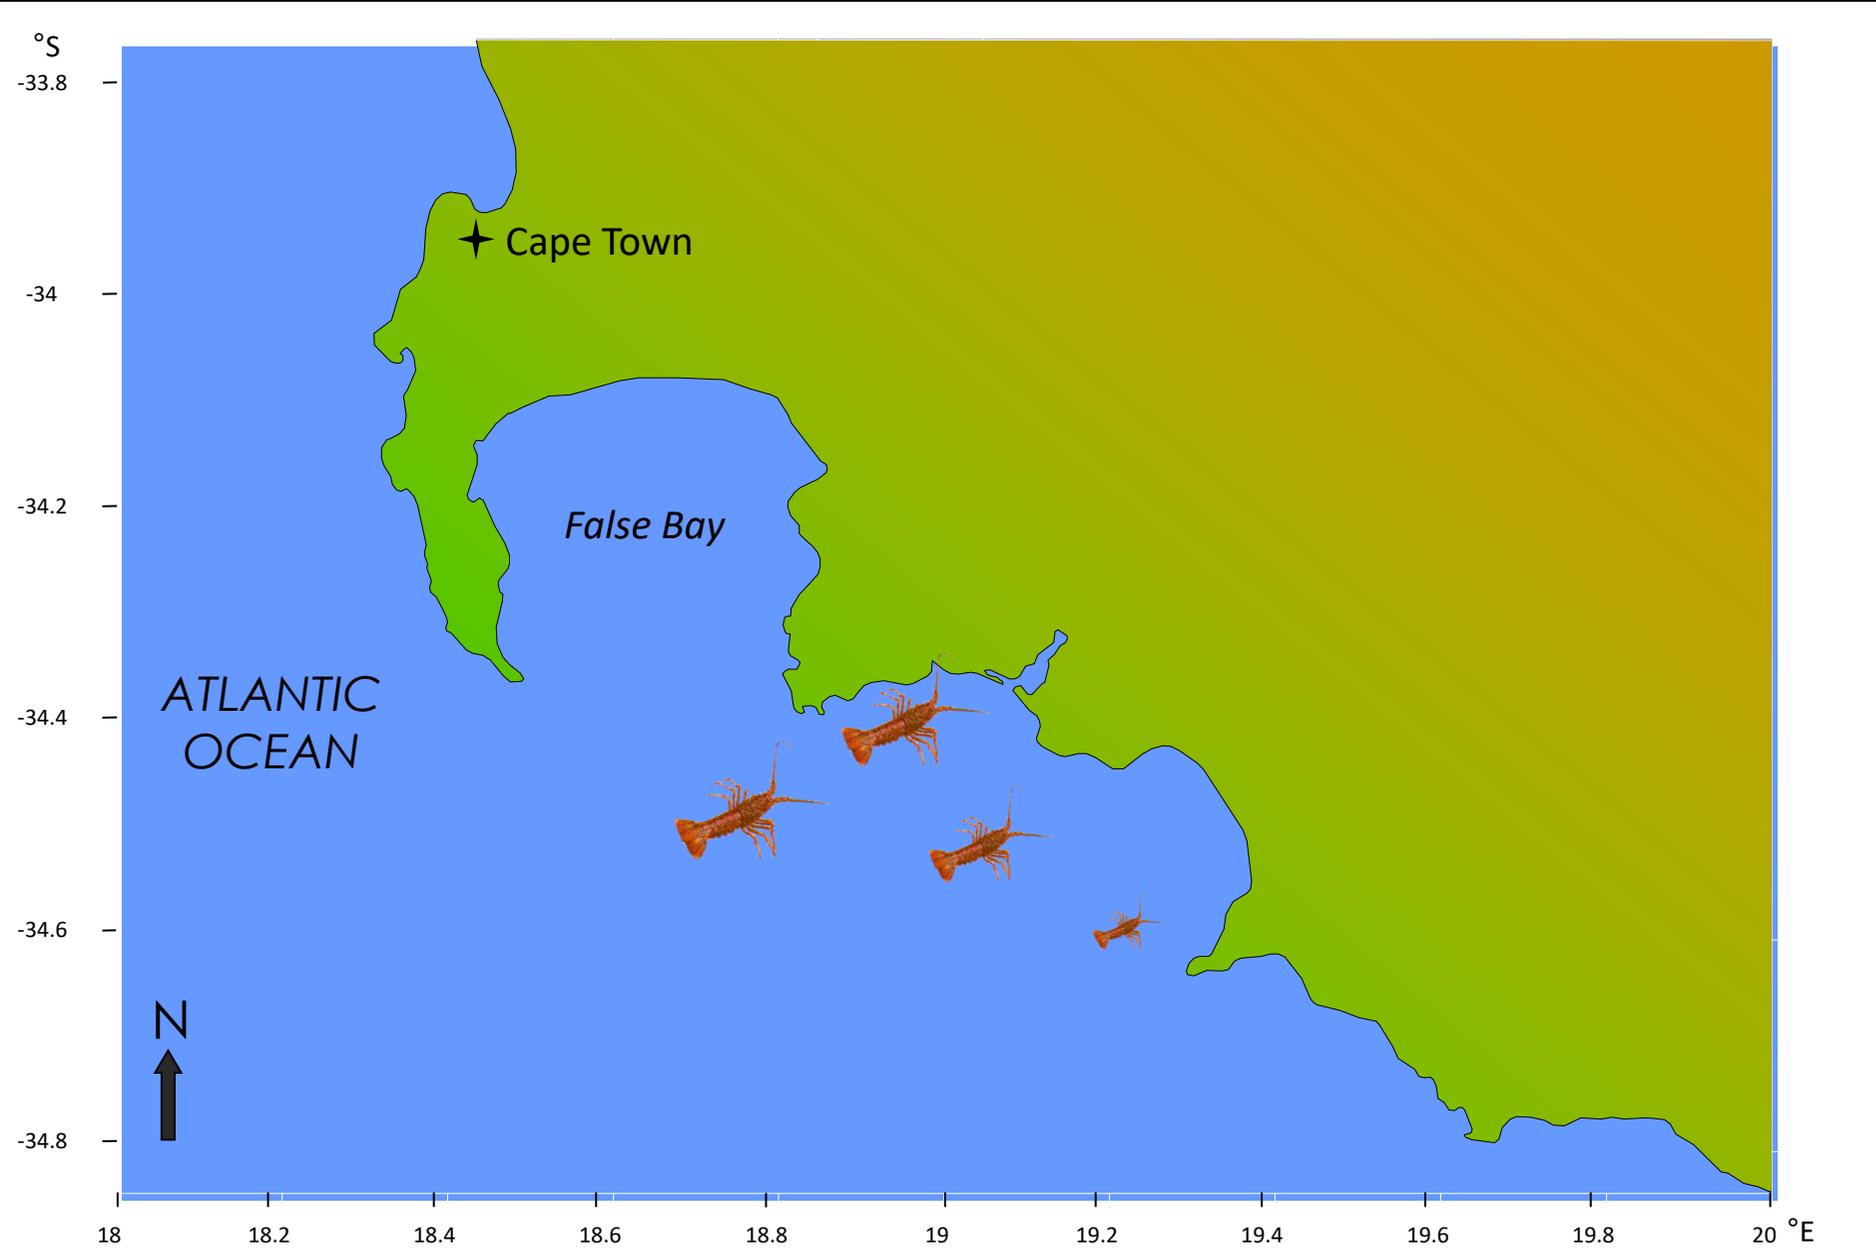

# Life on shells vs. rocks

Unique communities on shells vs. rocks, boosting diversity

Rock lobsters on the march...

Bye-bye happiness...

Abalone recruits: settlement site

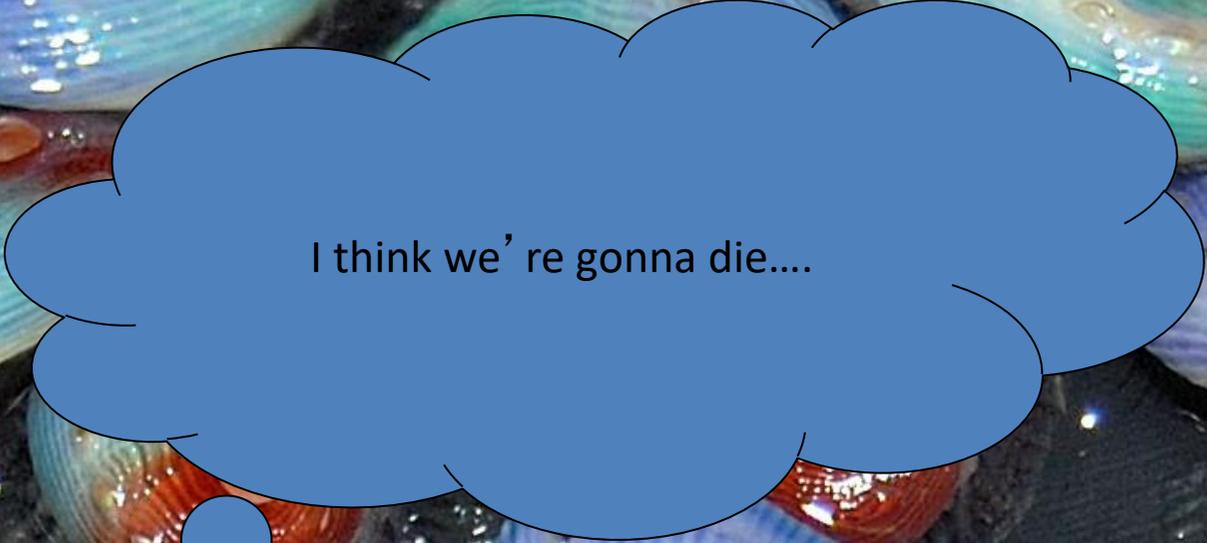

Bye-bye sweet caress...
